Zarin Rooy Caspian Co.

Zarin Rooy Caspian (ZRC) as one of the subsidiaries of Zarrin Industrial and Mining Group (ZIMG), with more than 4 decades' experiences in the Zinc Industry was founded in 2018 as a privately held company to produce and supply Zinc Dust for domestic and foreign industries. The plant was designed and equipped with European technology automated types of machinery under the supervision of experienced engineers to supply high-quality zinc dust.

We are committed:

To produce unique zinc dust; our young talented experts are committed to delivering high-quality finished products to our esteemed customers.

Our Mission:

Our aim is in the line with the concerns of our customers over the quality of production which we carefully assess, monitor and maintain throughout the production process.

About Zinc Dust:

Zinc dust is a pure metal powder, which is grey and produced by condensation of purified zinc vapors. The particle shape is spherical. Zinc dust is suitable for use in many binder formulations for the manufacture of zinc primers and shop primers, for example, inorganic ethyl silicate and epoxy primers.

Zinc Dust is used in zinc-rich and inorganic ethyl silicate paints to protect steel surfaces from corrosion. these paints are essential components of most heavy-duty coatings, as used in the protection of major structures such as offshore oil rigs, steel bridges, petrochemical, and powder industries. Other applications include the painting of sea containers and the construction and maintenance of ships and marine equipment.

About ZIMG

Throughout many years of efforts, Zarrin industrial and mining group has established brilliant records in development of lead and zinc industries in the I.R of Iran including exploration, mining, extraction, mineral processing and producing strategic high-end products to supply down-stream industries.
